Instructional Methodologies – Abbreviation Key

- Large Group: Lecture, Laboratory
- Small Group: PBL, Problem-Based Learning
- Independent: CC – Clipped Cases, DRR – Diagnostic Reasoning Cases
- Elective: GI – Guided Independent Learning
- Patient Care: IP – Inpatient, OP – Outpatient

Multiple Choice Tests
1. The length–time relationship predicts that for any given ventricular compliance and preload stroke volume will increase with...
   1. In hypertensive heart disease, sarcomeric responses include....

Team-Based Learning Applications
Discuss the items and come up with a final answer as a team.
1. Match the 4 pharmacologic effects with the appropriate drug class
2. Connect the pathophysiology described with the expected effect on total peripheral resistance, heart rate, and cardiac output

Progress Clinical Skills Examination

Necessary Science - Essay Questions
1. Describe the pathologic and physiologic consequences of progressive mitral stenosis
2. Describe the consequences to individuals and to populations of changing the definition of "hypertension" from >140/90 to >150/90
3. Discuss the relationship between the pathophysiology of HTN and the options for its pharmacologic management
4. What ethical principles/s undergird/s the process of informed consent?

Personal Learning Plan
Needs Improvement:
C. I am having trouble focusing my encounters to include only pertinent history and physical examination
T. I am having trouble linking the pathophysiology of HTN with its pharmacologic treatment
Improvement Plan
C. I am going to schedule 5 focused encounters at the Simulation Center, one for each of the topics we have covered so far. I am hoping to see a 25% improvement in my scores
T. I will review Katzung and take the practice quiz questions on this topic. Aim will be 25% improvement in score
